# BankApp

Create a banking app as per the class diagram shown in the example with Account and Person which has the deposit, withdraw and transfer functionality.

The App should have the following functionalities.

1. Total_balance of a customer is the sum of all balances of his/her accounts.

2. Customers should be able to transfer or withdraw money from one account to the other if the balance is sufficient.

3. Customers should be able to transfer money internally between their own accounts if the balance is sufficient.

4. Customers can deposit and withdraw cash to any of their own accounts.

5. Initial balance of an account must be Rs. 1000 at the time of account creation

6. Customer can view his total as well as individual balances of each account

Example

Constraints
Every customer may have more than one account;
Balance to be maintained Account wise;
Total Balance to be maintained customer wise;
